

ACAVALLO

LEATHER PASSION

*Thanks to all the horsewomen and horsemen for their fantastic collaboration,
for their patience, trust, passion and dedication that once again gave us the chance to immerse
and participate in the wonderful and stimulating universe of horses.*

A Story of Passion

Acavallo®'s history begins with a shared passion for riding.

Mauro Benetti and Monica Speroni, the company owners, partners in life and work, met in the 1980s both frequenting the equestrian field: Mauro for work, while Monica was following her passion for show jumping, competing with young horses. This meeting gave rise first to their love and then in 1987 to the idea of combining their mutual knowledge to set up a business that would comply with their values: passion and respect for riding.

Acavallo® was founded in 2003 and quickly became a company of excellence in the sector, internationally recognised for the reliability of its products.

In 2013 with the joining of the Benetti family's second generation in the company, Acavallo® implemented customer care and customer service departments with the aim of meeting the customers' demands and needs. Like her mother Vittoria Benetti also has a past as a horsewoman, and grew up in the company absorbing the technical know-how passed from her parents. Vittoria also coordinates the marketing and communication department.

Acavallo® boasts a 360° knowledge in horse technical equipment.

Many top international riders are advocating Acavallo® products, first of all dressage Olympic champion Charlotte Dujardin, testimonial of excellence alongside Scott Brash, Valentina Truppa, Simon Delestre and numerous others.

Acavallo® is present in over 50 countries and has numerous patents demonstrating the high standards of innovation pursued.

Acavallo® has undertaken an exciting new challenge, by developing an innovative collection of saddles and accessories, technically proven for future needs.

The focus is based on two fundamental principles that in turn merge into one: the well-being of the horse and rider. This is the benchmark without compromise in all phases of the wonderful Acavallo® adventure.

Passion and Research

From very detailed and technical research Acavallo® wanted to create a collection with the best innovative, technical and aesthetic features. All the components selected have been subjected to a rigorous quality control before assembly.

For an exclusive and innovative production Acavallo® has chosen only the finest materials from the best Italian tanneries. Only eco-sustainable leathers and hides have been selected without any artificial pigmentation. This complex selection process gives a natural velvety feel.

Care

For their very nature, a number of external factors can cause a precocious ageing of the hides. To lengthen the life of the product and defend it from natural factors, we would advise to regularly clean the leather with proper glycerine soap for hides.

Saddle Division

Style and Functionality

The unique design of cantle's s rubber band has a double function, guarantees greater impact protection in the rear part (more sensitive to scratches and peeling) and to give to Acavallo® saddles an unmistakable distinctive look.

1 A New Saddle Concept

Acavallo MAG System® is a new revolutionary technology to set the withers adjustment.

2 The MAG Key

Use the special key to adapt withers width through an innovative adjustment system.

3 Adaptive Tree

A toothed mechanism positioned inside the saddle tree allows riders to perfectly adapt the saddle to the anatomy of the horse.

Micrometer Adjustable Gullet System MAG

The Evolution of Horse Riding

Key point of the Acavallo® saddle line is the revolutionary adjustment system of the opening for the withers. It works with a simple and intuitive turn of an allen key to perfectly adapt the saddle to the anatomy of the horse. This is possible thanks to an innovative toothed mechanism positioned inside of the saddle tree. The patent pending system allows the rider to choose the best saddle position. Even more incredible is that this operation can be performed while mounted. Unimaginable up to now with conventional saddles.

4 Simple Movements to Adjust the Gullet

1 Insert The MAG Key · **2** Turn Clockwise

3 Choose The Best Saddle Position · **4** Twist Counterclockwise

The Tree

Jumping and Eventing Saddles

The medium-deep seat of Acavallo® jumping saddles allows the rider to find and keep an optimal position and balance during all phases of riding and jumping, by moving with the horse and supporting its natural jumping technique. The narrow twist of the saddle tree was especially designed to maintain the required close and constant contact with the horse.

Dressage Saddles

Particular care has been devoted to the development of the tree used in dressage saddles. A diligent technical and practical research has led to the creation of a particularly deep seat that allows the horse and rider to blend into a single entity.

Composition

Carbon · Composite

Tree made of composite nylon and carbon fibre hearth.

Composite · Steel

Tree made of composite material with spring steel reinforcements.

Composite

Tree made of composite nylon.

Acavallo Leather Passion

Saddle Division

The Panels

Acavallo® has built on the experience gained through years of collaboration with some of the most important and talented riders in the world. Aware of the importance of shoulder anatomy and muscle mass of the horse, Acavallo® has designed large panels with anatomical supports to give maximum comfort. The materials used are natural and hypoallergenic. Capable of adapting and absorbing the stresses of every day work and the pressures that develop during all phases of movement.

Composition

Integrated Flocked Panels

Leather, neoprene and felt pocket filled with polyfill.

Wool flocking is soft and conforms to a horse's back. Flocked saddles can be adjusted regularly to accommodate changes as the horse develops.

Wool is breathable keeping the horses back cooler. Fresh flocking also minimises the saddle bouncing and causing concussion to the horses back.

Latex Panels

Leather, felt lined and latex.

Latex panels give great cushioning, are very durable and holds up well to the concussive stress of jumping. The panels do not change shape and bed down.

AC9105 Masaccio

Features

- Double premium aniline full-grain calfskin leather
- MAG System®
- Composite/steel tree
- Integrated flocked panels
- Safe impact band

Bridles

The Acavallo bridle line is characterised by a particular softness and an ergonomic shape of the crown piece. Some models feature a uniquely shaped insert releasing the poll and the upper cervical spine of the horse. This design relieves pressure and provides for a perfect fit of the bridle in the poll area, one of the most sensitive body regions of the horse. The cheekpieces of Acavallo bridles attach to the noseband by means of an innovative and patent pending self-adjusting system which prevents the pinching of facial nerves, muscles and of the jaw joints, allowing the horse to chew and breathe much more naturally than with conventional designs. In addition to that the special suspension system reduces the risk of abrasions in the cheekbone area.

AC9500 Poesia

Features

- Italian rolled leather bridle
- Latex-padding crown piece, leather covered
- Contoured and anatomic crown piece with special insert to relieve pressure in the poll area
- Acavallo self-adjusting large noseband with white padding

Girths

Innovation, attention to detail and safety are the key elements characterising the design of Acavallo® range of new leather girths. To make the girth line unique, revolutionary and suitable for various requirements, we have created different models with Acavallo gel panel inserts as well as with removable lambskin linings. The Acavallo gel panel, positioned near the sternum, reduces pressure and consequently improves blood circulation increasing the supply of oxygen during movement of the horse. In addition, the anti-slip Acavallo gel always keeps the saddle in the correct position, avoiding backward slipping or unbalances. The removable eco-wool lining can be washed in order to prevent irritations caused by dirt residues. No detail has been overlooked, which is also shown by the use of special heavy-duty elastic girth straps. The elastic fibres of this innovative material feature an especially compact structure, thus ensuring maximum resistance and minimum thickness. Last not least, attention to every detail of our products is also shown by the fact that we are only using premium quality stainless steel roller buckles for our girths.

AC9400

Features

- Stud guard girth
- Calfskin and a sturdier full grain cowhide understructure
- Acavallo gel panel insert
- Stainless steel roller buckles
- Aluminium snap hook with soft rubber safety cover
- Two lateral D rings

Martingales and Breastplates

Attention to detail and passion for quality can also be seen in Acavallo breastplates and martingales lines. All components used for these products have been carefully selected and subjected to rigorous technical tests to make sure that they meet highest demands. Typical examples for such components are the new elastic inserts used on Acavallo breastplates, consisting of especially compacted, heavy-duty fibres, or our premium quality stainless steel buckles.

AC9600

Features

- Italian calfskin leather 5 point attachment breastplate
- Anatomically shaped and elasticated, permitting a maximum freedom of movement to the horse's shoulder during all phases of riding and jumping
